Company Background

- Founded in 1988
- Offices in Virginia Beach and Richmond, Virginia
- 80 employees with annual sales of \$10 million
- MiraDyne division founded in 2000
- Received \$670,000 in funding from NASA SBIR to develop SATS-Net
- Received \$670,000 in funding from NASA SBIR to develop GAAINS

- Small Aircraft Transportation System (SATS) Program is a five-year proof of concept research and technology development phase funded by US Congress to last until 2005 with a budget of \$69 million dollar.
- Partnership among NASA, FAA, US aviation industry, state and local aviation official and Universities to relieve the nation's current problems of highway gridlock and airport delays.
- The National Coalition for Aviation Mobility, NCAM, a non-profit organization is tasked with the coordination and integration of technical work and products of the SATS Program.

The Travel Problem?

Source: NASA SATS Program

Small Aircraft Transportation System

The SATS Program is a series of flight experiments leading to integrated flight demonstrations in FY2004-5 delivering:

- **Flight validation of enabling airborne technologies**
 - **Revolutionary Integrated Flight Deck**
 - **Automated Flight path Management**
 - **Experimental Data Relevant to Certification**
- **Technology Infusion/Transfer**
 - **Vested industry partners ready to implement**
 - **Accelerated technology commercialization**
- **System Impact Analysis**
 - **System cost/performance**
 - **Environmental/economic impact**

(R)evolutions in Higher Speed Travel

What is Next? More Speed to More Destinations

The “Atomic Structure” of Business Innovation Cycles

Typical Business Trip - GA vs. Airline

| GA Trip Segment | Time (min.) | |
|---|-------------|------------------|
|  Plan Flight (30 min.) check weather and NOTAMS with the FAA, and file your flight plan with ATC. | | Surface Travel |
|  Drive to Airport (15 min.) from home to the local community airport (Mansfield, MA). | | |
|  Load Baggage (5 min.) into the airplane. | | Fly |
|  Preflight Airplane (15 min.) and fuel the airplane. | | |
|  Taxi to Runway (5 min.) and perform an engine & systems run-up. | | Surface Travel |
|  Fly to Frederick, MD (130 min.) non-stop from Mansfield, MA to Frederick, MD using a route that goes around NYC and over Allentown, PA. Your airplane is a Beechcraft Bonanza that has an average cruise speed of 180 mph. | | Meeting |
|  Taxi to Park (10 min.) your airplane in a visitors tiedown spot on the GA ramp. | | Surface Travel |
|  Check In, Call Cab (5 min.) Check in with the FBO, close your flight plan, and order a taxi. | | |
|  Take Cab to Meeting (20 min.) Wait for the taxi, then ride into downtown Frederick. | | Fly |
| Travel Time to Meeting: 235 min. | | Surface Travel |
| Travel Time Round Trip (Door-to-Door) | | 7.8 hours |

Timeline for a 1-day business trip between Mansfield, MA, located 1-hr. outside of Boston and Frederick, MD, located 1-hr outside Washington, D.C. Timeline assumes a 2-hr. meeting in downtown Frederick.

GA – 7.8 Hours

Airline – 16 Hours

| Airline Trip Segment | Time (min.) |
|--|-------------|
|  Drive to Airport (60 min.) from the outlying suburbs into a big city with typical morning rush hour traffic. | |
|  Park Your Car (15 min.) in parking place that may end up being in a satellite parking garage due to over crowding. | |
|  Walk (10 min.) to check in counter. | |
|  Clear Security (90 min.) by presenting yourself and your bags for a thorough preboarding security inspection and 90-minutes before your scheduled flight. | |
|  Wait to Board (15 min.) before being allowed onto the airplane. | |
|  Wait for Push Back (15 min.) in your assigned seat for boarding to be completed before your airliner actually pushes | |
|  Taxi to Runway (10 min.) two miles to the other side of the airport. | |
|  Wait to Takeoff (15 min.) while the 14 airliners in front of yours work their way through the queue | |
|  Fly to D.C. (90 min.) at 500 mph. On a flight from Boston to Washington, D.C., your actual flying time without weather delays would be about one and a half hours. | |
|  Taxi to Gate (10 min.) after landing and wait for your designated gate to open. | |
|  Wait for Jetway (5 min.) while they get the Jetway in place and open the door. | |
|  Deplane (5 min.) and wait for the for the people in front of you | |
|  Claim Baggage (20 min.) at baggage claim and wait for your bags to arrive | |
|  Wait for Rental Car Bus (15 min.) Walk to the rental car shuttle bus pickup location and wait for the bus | |
|  Ride Rental Car Bus (15 min.) to the outlying rental car lot | |
|  Get Rental Car (30 min.) and wait in line to receive your rental car agreement and map, walk to the car, load it up | |
|  Drive to Meeting (60 min.) Make your way through the streets and highways of a city you've never been to before with only moderate levels of late morning traffic. | |
| Travel Time to Meeting: 483 min. | |
| Travel Time Round Trip (Door-to-Door) | |
| 16 hours | |

CARD ACCESS MANAGEMENT
Assign cards and manage local and national access rights

SATS-Net's Internet-Enabled Access Control System utilizes the power of the Internet and Virtual Private Networking technology to provide SATS airports with a national card access system. Individual SATS airports can view and manage their security access rights for local airport staff and SATS-Net members. When the airports change the after-hours and public rights the information is automatically sent to SATS-Net's national database and posted on the airport's news page at www.sats-net.com to provide real-time facility access information to all travelers. Because the access control system uses a centralized national database, valuable event information can be accessed, monitored and controlled in real-time.

SATS-Net Potential Revenue

Membership Revenue:

- Individual

- Airport

Travel Services Commissions:

- Auto Rentals

- Commercial Flight Bookings

- Hotel Reservations

E-Commerce:

- Airplane for Sale Ads

- Pilot Supplies (GPS, Headsets)

Value Add Services:

- Kiosk Sales

- Web Appliance Sales (Door Access & Web Cameras)

Co-operative Revenue:

- Corporate Advertising on SATS-Net Website

- Partnerships with NASA, SATS Labs & State Aviation Departments

SATS-Net Milestones

- Created an airport information database of 5000+ airports
- Integrated Travel Now's hotel, car, and flight, reservation system into the SATS-Net database
- Tested an automated Call Taxi service using web based Interactive Voice Response (IVR) technology
- Created Aircraft For Sale listing module
- Integrated Restaurant Row's restaurant/menu database into the SATS-Net database
- Developed automated parsing routines to directly import FAA data into the SATS-Net database
- Developed and tested a secure, centralized database-driven, door/airport access solution for Danville Airport
- Negotiated use of tourism data from the state of Wisconsin and Virginia
- Grand opening of the first Virginia SATS airport at Danville Regional Airport on December 17, 2002
- Currently have over 400 members

SATS-Net Future Goals

- Re-brand SATS-Net.com to AirTraveler
- Acquire use of tourism data from other states
- Automated car rental system
- Trip/flight planning tool
- Establish corporate sponsors
- Integrate Microsoft's Map Point software
- Integrate automated fuel services
- Implement WAP and PDA capabilities
- Enhance site features to include: User Preferences, Increase Database Content, International Pilot Information
- GAAINS/Automotive Telematics
- Integrate Enhanced Pilot Information Center (EPIC)

General Aviation Aircraft Information Network Server

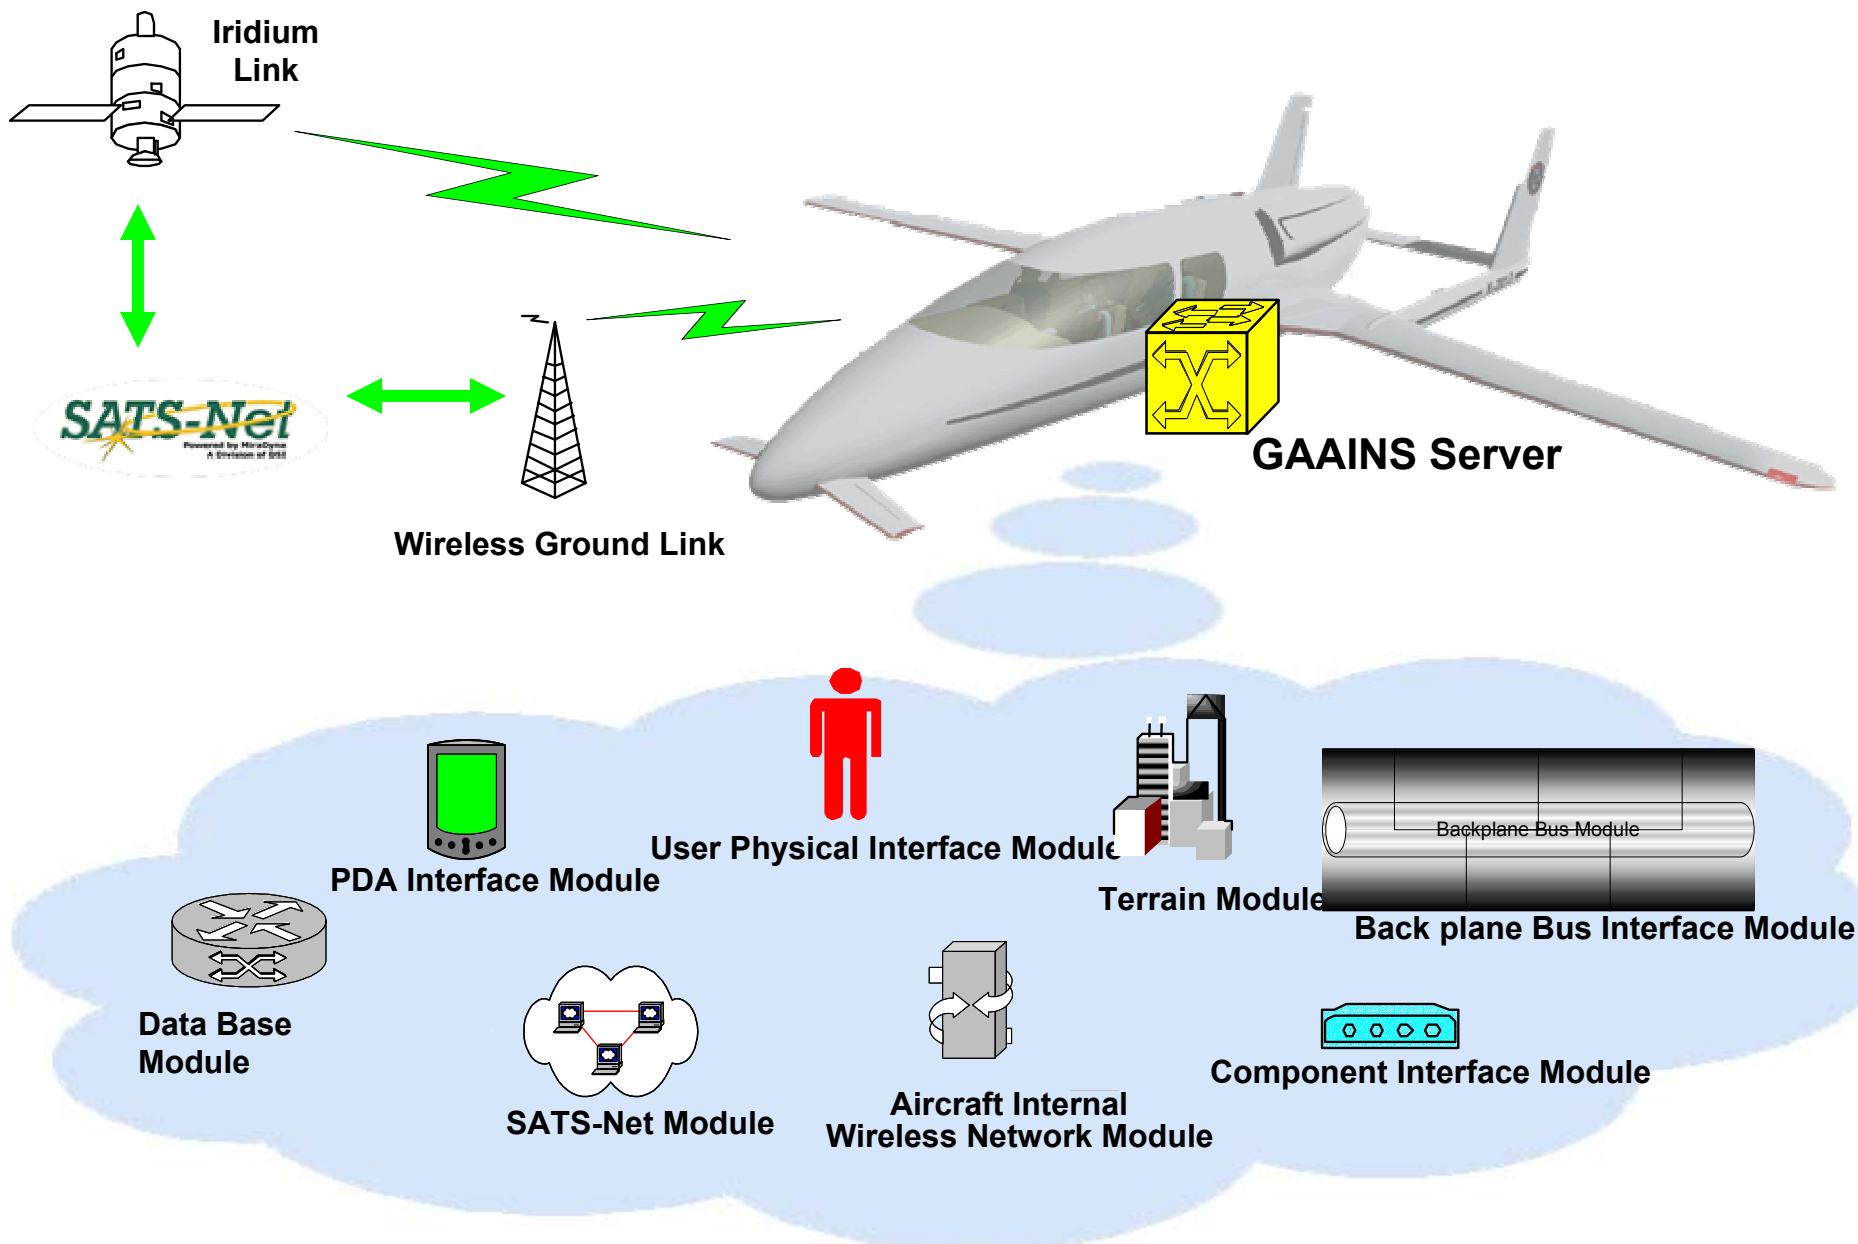

The GAAINS Innovation

- Provide core In-Cabin intelligence and processing power needed to drive informational and eventually mission critical applications (Highway in the Sky, Airborne Internet) required to meet the four SATS objectives
- Clustered small form factor server utilizing flash based storage
- Robust high-speed satellite data link module
- Integrated backplane bus architecture
- Standardized interface protocol for the AGATE/SATS glass cockpit

General Aviation Aircraft Information Network Server

GAAINS Phase I Milestones

- Operating System & Programming Language Selected
 - Standardized on Microsoft .NET Framework
 - Standardized on Microsoft CE Operating System
- PC 104 Hardware Standard Adopted
- COTS Iridium Satellite Modem Flight Tested
- CANBus Data Bus Incorporated
- Wi-Fi Standard 802.11 Selected
- Universal Data Bus Platform via Multi-Threaded Peripheral Device Control Identified
- Flight tested GAAINS

GAAINS Hardware

- Solid State Memory
- Redundant Processors
- Ruggedized
- Small Form Factor
- COTS Sensors and Devices
- CANBus w/PC104 Form Factor

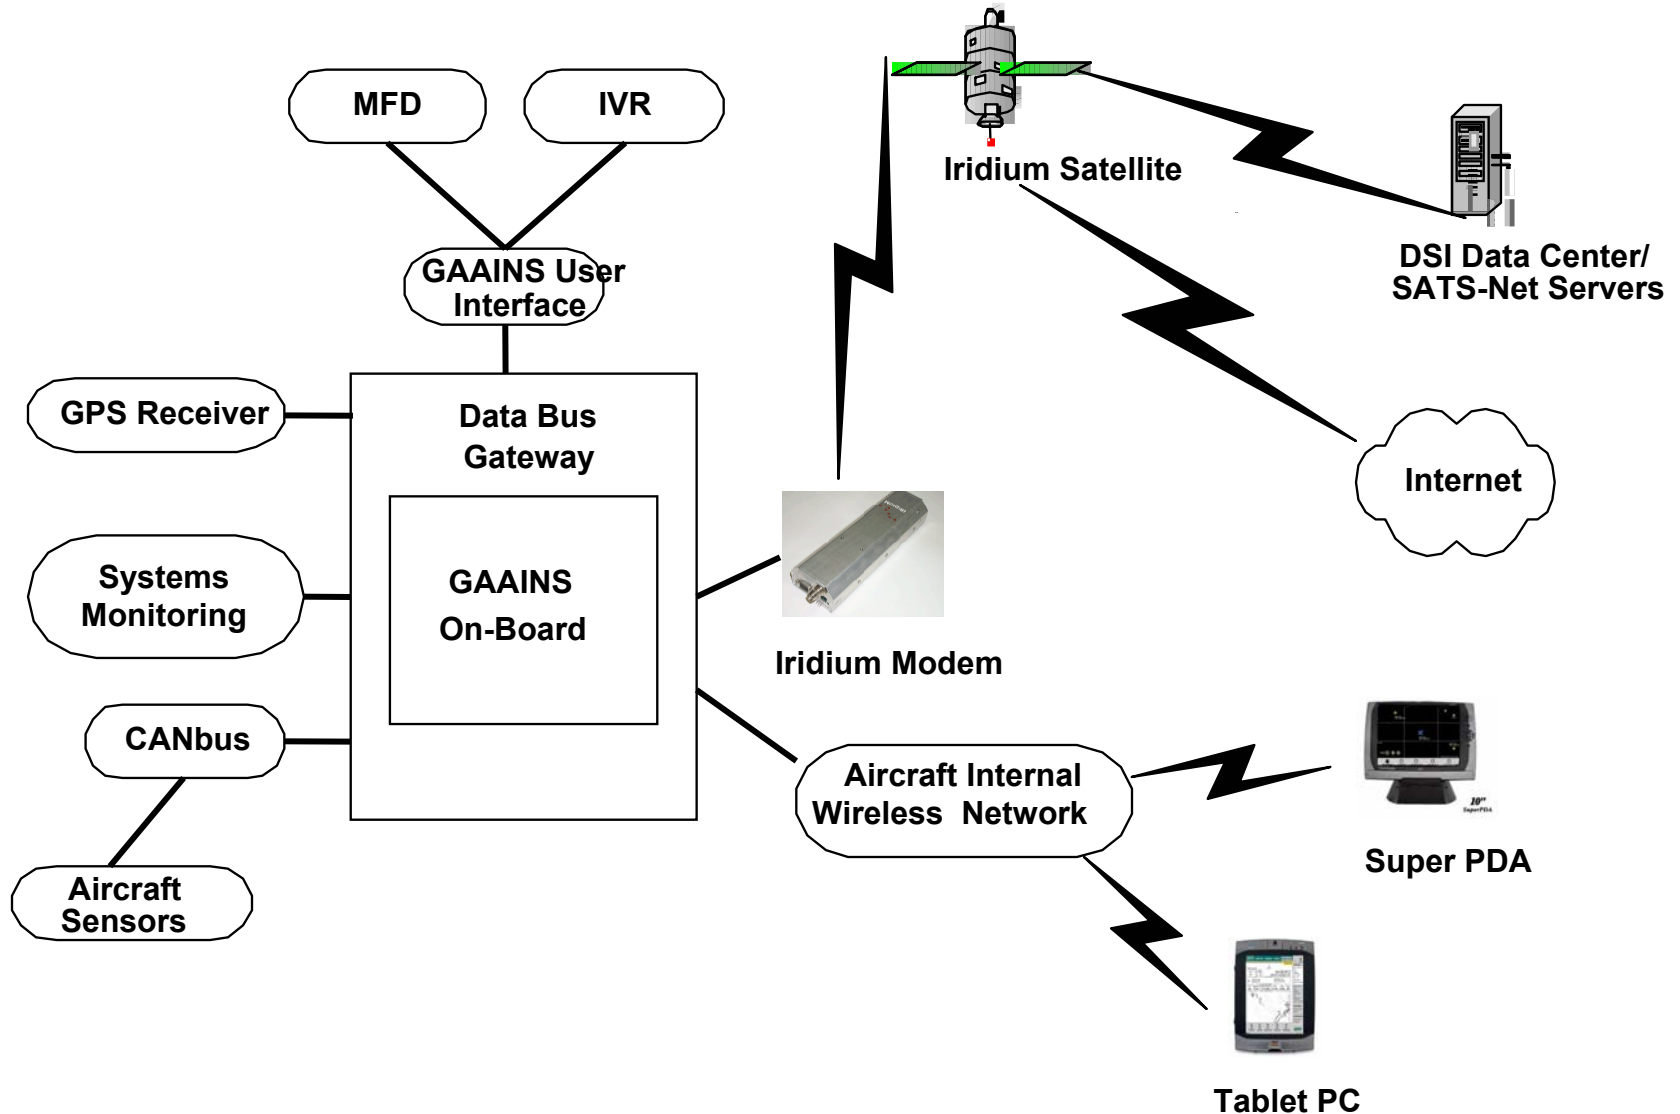

GAAINS Universal Data Bus Gateway

- CANBus chosen for: PC 104 form Factor, COTS Components, High Speed, Real Time Operation and Ruggedness
- GAAINS must also be adaptable with other Data Bus Technologies for future applications
 - Telematics
 - Video

Universal Data Bus Gateway

Basic GAAINS Telematics System

GAAINS - A Geography Based Tool For The SATS Traveler

Real Time On-Demand Travel Information thru Aircraft Intranet and SATS-Net

- E-Mail / Web Access
- Lodgings
- Restaurants
- Airport Facilities
- In-Flight Information
- In-Flight Entertainment

The screenshot displays the SATS-Net website interface. At the top, there is a green navigation bar with the SATS-Net logo and tabs for AIRPORT INFO, FREQUENCIES, WEATHER, and APPROACH PLATES. A yellow banner below the navigation bar reads "PHF-Newport News". The main content area is divided into several sections: a large image of the airport with a "Click image for larger view" link; a "Runways" section listing two runways (02/20 6526x150 CONCF-F and 02/25 8003x150 CONCF-P); a "Fuel" section listing prices for Texaco and Jet A; an "Airport Contact" section with manager information; a "Frequencies" section with various frequencies; and a "Closest Airport" sidebar on the right listing nearby airports (PHF and JGG) with their frequencies and fuel prices. At the bottom, there is a grey bar with icons for PROXIMITY, WEATHER, CAMERA/VIDEO, TRAVEL INFO, and PREFERENCES, along with the GAAINS logo.

User selected to view PHF's approach plate.

This highlighted box shows the user selected to view detailed info about PHF airport.

GAAINS Future Goals

- Develop advanced “BLACK BOX” real time streaming safety applications
- Development of predictive analysis module.
- Integration with engine monitoring systems to stream engine data
- Integration with onboard bus to stream A/C configuration data
- Stream live onboard images
- Develop user interfaces:
 - Large area PDA’s
 - Existing displays
 - Voice Recognition
- Integration of High Speed Bus Technologies & Telematics
 - BlueTooth, CanBus, 802.11b, etc.
- Investigate Security (SAFE-SATS)
